Magnifies your face to the details
MAGNIFICATION MIRROR

Patented "Napure Mirror" reflecting the real color of your skin

Napure Mirror

特許 第3732490号

MAGNIFICATION Mirror with PLAIN Napure Mirror

The magnification mirror magnifies your face to the details and is suitable to care keratin plugs, mottles and wrinkles on your skin.

Images are magnified in concave mirrors and enlarged more with the increase of their curvature.

The magnification of our mirrors is roughly indicated by the radius of curvature (abbreviated as "R") of the mirrors. A magnification mirror having smaller radius of curvature (R) has greater curvature, in other words, reflects a larger image.

Plain mirror
Napure Mirror

For checking the color of your skin and selecting suitable makeup coloring

2x

Concave mirror of 1000R

Good for the makeup on the whole of your face and for eye makeup

3x

Concave mirror of 600R

Good for applying a concealer and for eye makeup

5x

Concave mirror of 400R

Good for caring skin and eyebrows and for eye makeup

7x

Concave mirror of 300R

Good for eye makeup such as putting on false eyelashes

[Usage]

- At first, move your face close to the magnification mirror, and then move away from the mirror to find the focal point where you can see clearly reflected image.
- A mirror of greater curvature has shorter focal length, in other words, you can see a clear image nearer to the mirror surface.
- A high-magnification mirror gives vague image outside the focal point.
- Do not look at the magnified image too long. It may cause eyestrain or make you feel sick.

*The plain mirror is made of the patented "Napure Mirror" and the magnification mirror is made of a conventional mirror.

2x (1000R)		5x (400R)	
3x (600R)		7x (300R)	

What is "Napure Mirror" used as the plain mirror?

The mirror reflecting the real color of your skin as seen by others
The most suitable mirror for matching the colors of your skin and a foundation and for partial makeup

Glass of high clarity + Reflective metal layer by vacuum deposition =

"Napure Mirror" reflects natural pure colors with minimum change.

Glass of high clarity

The glass used for the conventional mirrors contains considerable amount of iron to absorb blue light of the incident light and make white color look dull. We have developed "Napure Mirror" made of clear glass with minimum iron content. "Napure Mirror" rarely changes the reflected colors to show natural and pure colors without influence by the glass. Thus "Napure Mirror" is the most suitable for matching the foundation to the colors of your skin and partial makeup. *The photos show an image of reflection.

Cross section of Napure Mirror

Cross section of the mirror

Napure Mirror (in our test)

Reflects real color of human skin with minimum color change.

Conventional silver glass mirror (in our test)

White color is reflected into slightly yellowish white and other colors are reflected colors look dull.

Comparison in reflection (in our test)

Napure Mirror
The mirror of ultra-clear plate glass reflects natural and pure colors with minimum change.
