

Makeup Mirror

HORIUCHI MIRROR is a collection of mirrors made of the patented mirror (HORIUCHI MIRROR®), which reflect pure and natural colors. HORIUCHI MIRROR® can reflect everything as it is owing to the combination of highly transparent glass substrate containing minimum iron (which causes dull colors) and the specular metal coating which reproduces colors with high accuracy. More clearly reflected skin color teaches the user the best-matched foundation color to enable much better finish of makeup. This is why the mirrors are favored by professional beauticians and makeup artists.

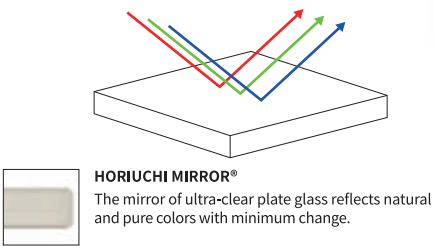

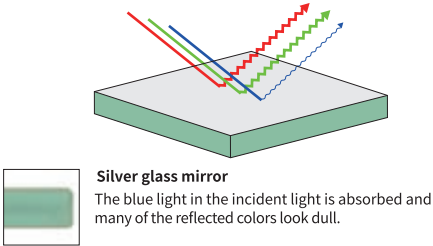

Makeup Mirror

The height and angle of the mirror are adjustable for use. The low position enables easy checking of details and is suitable for skin care and makeup. The mirror gets 10 cm higher at the high position and is suitable for hair styling.

HORIUCHI MIRROR®

Accurately reflects colors without influence by the color of the glass plate to show the natural color of your skin.

Height and angle steplessly adjustable for use

The height and angle of the mirror are adjustable for use, such as skin care, makeup and hair styling (the mechanism will be applied for a patent). The torque hinge of the mirror enables stepless fine adjustment of the angle.

Size enough to reflect you from hair to neck line

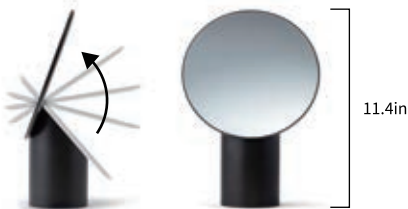

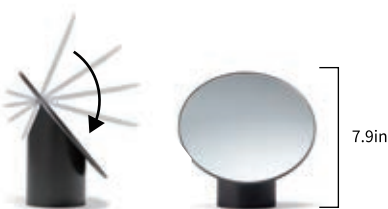

The mirror has a diameter of 200 mm larger than usual tabletop mirrors. It is good for makeup and hair styling all over.
